

This cable is used for loading the Central Unit firmwares.  
 It is a simplified alternative to the full "Software Loader Adapter" and lacks automatic power on/off control during the loading procedure and will require manual power cycling.  
 Please follow the instructions in the manual/loader software for updating the firmwares.

9 pin female  
 D-Sub connector

To computer  
 serial port

To Central Unit  
 serial port

Momentary push button switch.  
 ONLY needed for loading central units with serial numbers lower than 2000! Do not connect this switch for central units with serial numbers 2000 and higher, use the central unit front panel SELECT key instead!
